## **UVitec Introduces High Density FLEXO Ink Series**

—*Unique Formulation Gives Inks High Viscosity and Excellent Color Strength*—

Lodi, NJ (August 2003) — UVitec Printing Ink introduces the 97 series, a high density FLEXO ink series. Featuring excellent color strength, the 97 series is specially designed for printing applications using high anilox rollers and other extremely fine printing applications.

Developed using a proprietary formulation, the 97 series has excellent cell release characteristics. The inks are especially well suited for anilox rollers with 800 BCM (billion cubic microns) or higher. Because of the performance characteristics, the 97 series allows clean, sharp images to be printed with a great deal of consistency. The inks also have strong adhesion and improved hot stamping quality. Their excellent throughcure allows presses to operate at higher speeds, increasing press productivity and efficiency.

The high density 97 series does not emit any volatile organic compounds (VOCs), and is in compliance with Clean Air Standards. It is available in process colors.

### **About UVitec**

UVitec Printing Ink, Inc. is a leading manufacturer of high quality UV curable inks and coatings. UVitec manufactures standard inks and a number of specialty products used for printing and coating cosmetic folding cartons, soda bottle labels, pharmaceutical labels, consumer product labels, business forms, lottery tickets, catalogs, and baseball cards. Founded in 1980, UVitec is recognized for its experience, service, and quality products.
