UVitec Introduces UV Inks Specifically Designed for the Autoclave Process

Lodi, NJ (January 2004) — UVitec Printing Ink introduces a specialized ink formulation designed to withstand the autoclave sterilization process. UVitec's proprietary formulations result in an Autoclave-proof ink that holds up to high-pressure, temperature and steam and still maintains excellent color strength and densities. These Autoclave inks are available in UV Flexo, UV Letterpress, and UV Litho ink series, as well as in all PMS colors and special matches.

UVitec's exclusive process, based on the company's three decades of UV experience, protects the pigment from shifting under the extremes the Autoclave process puts it under. The ink series emerges from the Autoclave process with the fidelity and repeatability that printer's demand.

The Autoclave ink series from UVitec offers excellent printing characteristics. All Autoclave ink series are designed to perform optimally on whatever printing process the printer is using. In addition to standard formulations, UVitec can customize the inks to stand up to a variety of different resistance criteria and other perimeters.

About UVitec

UVitec Printing Ink, Inc. is a leading manufacturer of high quality UV curable inks and coatings. UVitec manufactures standard inks and a number of specialty products used for printing and coating cosmetic folding cartons, soda bottle labels, pharmaceutical labels, consumer product labels, business forms, lottery tickets, catalogs, and baseball cards. Founded in 1980, UVitec is recognized for its experience, service, and quality products.
