UVitec Printing Ink Introduces Flexo Scanning Coating For Use in Security & Label Verification Applications

Lodi, NJ (April 2003) — UVitec Printing Ink introduces a UV curable scanning coating (#15610-87) created using a proprietary manufacturing process that results in the coating achieving a high degree of brilliance and readability. Designed for use on flexo presses, the scanning coating is extremely well suited for virtually any security & label verification application, especially pharmaceutical labels and check printing.

UVitec's exclusive process, based on the company's three decades of UV experience, suspends the coating's particles in a most efficient manner until they are cured. The process allows the full potential of the fluorescent whitening agent to be realized, creating a strong bluish-white effect when the label is held under a black light.

There are a number of other benefits realized because of the unique formulation. The scanning varnish has excellent gloss, good surface slip, scratch resistance, and flexibility. It is also resistant to a wide variety of chemicals. Because of the strong overall attributes of the scanning coating, printers can determine if adequate and uniform coverage has been achieved.

In addition to the standard formulation, UVitec can customize the scanning coating to meet individual customer needs. Experienced UVitec technicians will work with customers to determine the requirements, and adjust the formulation to provide the proper features for the specific printing job.

About UVitec

UVitec Printing Ink, Inc. is a leading manufacturer of high quality UV curable inks and coatings. UVitec manufactures standard inks and a number of specialty products used for printing and coating cosmetic folding cartons, soda bottle labels, pharmaceutical labels, consumer product labels, business forms, lottery tickets, catalogs, and baseball cards. Founded in 1980, UVitec is recognized for its experience, service, and quality products.
