UVitec Introduces New Rotary Screen Glitter Coating

— Coating has ideal balance of glitter particle size and printability —

Lodi, NJ (May, 2004) — UVitec Printing Ink, Inc. introduces **19130-77 Rotary Screen Glitter UV Coating**, a smooth printing, glossy, large particle size coating designed for use with 100 and under screen mesh sizes. This product is ideal for printing in-line on narrow web combination presses.

UVitec's glitter coating is designed to provide an excellent print surface that will resist scuff and rub. While this coating is designed to seamlessly integrate with UVitec's premium offset, letterpress and flexo series of inks, it is manufactured to complement most other ink systems available.

UVitec's unique particle size will provide sufficient coverage to ensure the right "glitter" appearance while not tearing mesh or wetting poorly as many of the competitive products do. In addition to the standard silver glitter coating, this product is also available in a variety of different colors and shapes. Please contact UVitec for more information.

About UVitec

UVitec Printing Ink, Inc. is a leading manufacturer of high quality UV curable inks and coatings. UVitec manufactures standard inks and a number of specialty products used for printing and coating cosmetic folding cartons, soda bottle labels, pharmaceutical labels, consumer product labels, business forms, lottery tickets, catalogs, and baseball cards. Founded in 1980, UVitec is recognized for its experience, service, and quality products.
