UVitec Introduces Matte Varnish with Excellent Fade Resistance

Lodi, NJ (May 2003) UVitec Printing Ink introduces a matte varnish (#21364-07) for letterpress and litho applications that produces a very matte finish, excellent fade resistance and excellent product resistance. Developed in-house using a proprietary manufacturing process, this matte varnish is extremely well suited for pharmaceutical labels, prime labels and any other application requiring a high quality matte varnish.

The special manufacturing process developed by UVitec efficiently suspends the particles used in the varnish until they are cured. By utilizing such a process, the full potential of the matting agent is realized, so that a strong, scratch resistant surface is created.

Other benefits are realized through the manufacturing process as well. In addition to an excellent matte finish, 21364-07 has good scratch resistance and flexibility. It is also resistant to a wide variety of chemicals. The overall attributes of the matte varnish help ensure that adequate, uniform varnish coverage is achieved.

In addition to the standard formulation, UVitec can customize the matte varnish to meet individual customer needs. Experienced UVitec technicians will work with customers to determine the requirements, and adjust the formulation to achieve the proper features for the specific printing job.

About UVitec

UVitec Printing Ink, Inc. is a leading manufacturer of high quality UV curable inks and coatings. UVitec manufactures standard inks and a number of specialty products used for printing and coating cosmetic folding cartons, soda bottle labels, pharmaceutical labels, consumer product labels, business forms, lottery tickets, catalogs, and baseball cards. Founded in 1980, UVitec is recognized for its experience, service, and quality products.
